**Active Boot Disk Suite 15.0.6.1 Crack Key Updated {2020} High Quality**

All in One Toolkit Serial Keygen Key Cracking. We provide the latest version of the best cross-platform development toolkit for A. Q: PHP Round all value in array with a number of decimal point I have an array result and I want to round off any value before it goes into a database. The array I receive from my query will have results that look like this: array( (int) 0 => array( 'serial' => '20', 'created' => '2014-10-21 12:18:11' ), (int) 1 => array( 'serial' => '25', 'created' => '2014-10-21 12:18:12' ), (int) 2 => array( 'serial' => '20', 'created' => '2014-10-21 12:18:12' ), (int) 3 => array( 'serial' => '15', 'created' => '2014-10-21 12:18:14' ), (int) 4 => array( 'serial' => '20', 'created' => '2014-10-21 12:18:14' ) ) I have the following code that works, but it isn't the solution. How can I get rid of the extra integer in the array? \$query = "SELECT serial, created FROM system\_orders"; \$result = mysql\_query(\$link, \$query);
